R- PAVE™ Installation Guide

This guide is for hard-standing and other similar light traffic areas such as driveways, where firm ground conditions exist.

For areas of heavier traffic, detailed installation instructions
Are available contact: sales@dynawest.co.uk

1. The R-Pave™ grid – the grid is installed with the thicker Material as the base net to the soil
2. Connection and disconnection – grids should be placed such that the connection will give a uniform pattern, e.g. complete circles to the top and right. The grids connect with an audible click. Grids can be disconnected by levering the grid upwards
3. Remove the existing turf, topsoil, concrete etc. to a depth of approximately 70 mm. Level off and firm down the ground.
4. Install edging boards if required.
5. Cover the surface with a weed suppressing membrane.
6. Cover the membrane with 5-14 mm diameter gravel to a depth of 30 mm.
7. Place the R-Pave™ grids onto the gravel layer.
8. Fill the grids with 5-14 mm diameter gravel – fully rounded ‘pea gravel’ is not recommended.
9. As a guide 1 tonne of gravel is required for every 15-20 sq m.

Alternatives:

Grassed Surface At 8 above, fill the grids with a propriety rootzone – A blend of soil and sand. Carry out a normal seeding and watering Programme . Alternatively thin-cut turf can be rolled into the surface of The grids.

GARDEN SHEDS. The R-Pave™ can be used in place of paving slabs by Simply following steps 1-4 above. The additional steps are a matter of Personal choice.
